Instruction to Authors

Iranian Journal of Health Research (IJHR) is a peer review quarterly journal and publishes original papers related to all areas of basic and biomedical sciences with special approach to disease prevention & community health promotion. The journal welcomes to all researchers working in the different fields of health.

Manuscripts are accepted on condition that they have not been previously published or submitted for publication and are not going to be sent to other journals.

Submission process:

At the present, manuscripts can be sent through the e-mail address of mblotfi56359@yahoo.com . However, the online submission system of the journal is under construction and can be used in the future.

Language and style: Contributions should be in either American or British English language. Non-native English speakers may be advised to seek professional help with the language. All materials should be typed double line spacing numbered page. Abbreviations should be standard and used just in necessary cases, after complete explanations in the first usage.

Form of manuscript:

Title page of article should include 1) the title of the article; 2) authors' names; 3) name of institution where the work was done; 4) running title (short form of the main title presented on the top of pages); and 5) complete mailing address, telephone/ Fax numbers, and email address of the corresponding author. This page is unnumbered.

Abstract should be structured for original articles providing background / objective for the study; methods, results and conclusion altogether not exceeding 250 words. Number this as page 1. The abbreviations should not preferably be mentioned in the abstract.

Keywords are used for indexing purpose: each article should provide three to five keywords according to the Medical Subject Headings (MESH).

Introduction Should provide a background and specifies the research objective of the study or observation.

Materials & Methods must indicate clearly the steps taken to acquire the information. It should be detailed (including : controls, inclusion and exclusion criteria etc). Repeating the details of standard techniques is best avoided.

The software used for statistical analysis and description of the actual method should be mentioned.

Results: should be presented in chronological sequence in the text, table and illustration. Organize the results according to their importance they should result from your own study.

Tables and illustrations have to be cited in order they appear in the text using Arabic numerals. Tables should be simple and not duplicate data in the text of article. Figures should be presented only if they improve the article.

Discussion should emphasize the new and important aspects of the study and the conclusion that follow from them. Possible explanations for these findings should be mentioned. The limitation of the work and the implications of the finding for future research should be noted.

Acknowledgments should be mentioned for any technical help, general, financial, and material support or contributions that need to be acknowledged (do not justify authorship)

References should be compiled numerically according to the order of citation in the text in the Vancouver style. Listed below are sample references.

References

Journal article:

Blair SN, Kampert JB, Kohl HW. Influence of cardiorespiratory fitness and other precursors on cardiovascular disease and all cause mortality in men and women. *JAMA* 1996; 276:205 – 210.

Complete Book:

Guyton AC: textbook of medical physiology. 8th ed. Philadelphia, PA, Saunders, 1996.

Letter to the Editor: The IJHR welcomes letters to the Editor pointing out alternative interpretations of published results, or commenting briefly on topics of relevance to the journal's readers.
